**Subject:** Extraterrestrial Disclosure Meeting: Week of August 11

Dear John:

I am available and would like to schedule a meeting with you the week of August 11 to discuss Extraterrestrial Disclosure. I live in the Washington DC area. Dr. Mitchell will not be with us, unfortunately.

As our earlier emails discussed, we are moving into a new phase of public awareness of the extraterrestrial presence. The UFO craft investigation phase seems to be concluding, as our own technology advances.

The next phase is one of consciousness. I call it Exoconsciousness. I believe it will be the most significant phase of Disclosure. This phase integrates consciousness, the ET presence, energy systems such as zero point and eventually will achieve the science-technology for creation of consciousness craft.

John, as you lead our country in the fields of energy and climate change, our country is also leading the way in securing our planet from destruction by asteroids and debris. This is significant because we humans are here to preserve our planet as a seeding ground for life in the cosmos.

While many discuss the deterioration of climate on the Earth, which is true, we also need to focus on our achievements. For the first time, possibly in planetary history, we are able to protect our planet from cosmic destruction which has happened numerous times. Each time we experience a cosmic hit, our planet and our species goes through a lengthy rebuilding phase. We are now entering a time when we are able to protect our own planet--aware of its significance and our major role in sustaining it.

As we humans become planet preservationists within a cosmos of other beings--we achieve Exoconsciousness. We are aware we are not alone. Now or Ever.

I look forward to meeting with you, John.

All the best,  
Rebecca
